

TASK-2 REPORT

Network Security and Scanning

Submitted By: Vishnu Vardhan
Cybersecurity Internship – Apex Planet

Introduction

Network security protects computer networks from unauthorized access, misuse, and cyber threats. Network scanning identifies devices, open ports, services, and vulnerabilities.

Objectives

Understand network security fundamentals, learn network scanning techniques, identify open ports and services, and understand vulnerability assessment.

Tools Used

Nmap, Wireshark, and basic networking tools.

Conclusion

This task improved understanding of network security, scanning techniques, and methods used to secure networks and identify vulnerabilities.
